

## URBAN RAMPS: STEEL SPECS

- **Laser cut framework**

By using a **4mm** laser cutting technology to cut our framework, we are able to keep our tolerances to a minimum which allows us to maintain the best ramp geometry. This also means that each ramp section fits together perfectly to give a seamless look and feel.

- **Tamper Resistant – Security stainless steel fixings**

All fixings used are stainless steel and the pin hex head bolts can only be removed using a specialist tool.

- **Thick riding surface**

Our 4mm steel riding surface prevents the possibility of dents, chips, cracks or warping. All the edges of the riding surface have a 3mm radius. This combined with corrosion protection of galvanised steel and the perfect grip of Urban Pro XV surface paint is a maintenance departments dream come true.

- **Hot-Dip Galvanised coping and grind rails**

The galvanising process means that even after years of heavy use and grinding these parts will still look good and be free of rust.

- **Urban Pro XV Polyester Powder coat**

Our skating surface is coated with Urban Pro XV, a unique hard wearing anti slip grip finish, this not only offers the ultimate ride but also great corrosion protection and grip.

- **Fixing free riding surface**

All factory welding is carried out on the underside of the ramp which means that there are no fixings needed to attach the riding surface. This ensures the ultimate ride.

- **Bevelled Leading Edge**

We bevel down our leading edge to make a smooth transition as this edge goes straight into the concrete. This way there is no need for a separate approach plate.

- **Vertical Guardrails**

The guardrails are hot-dip galvanised steel which is tough and corrosion resistant. The vertical design allows airflow, increases visibility and minimizes the likelihood of climbing.

- **Personalised Panels**

We have incorporated our personalised panels into the guard rails. This offers the opportunity to make your ramp unique with an image or name of your choice.

- **A 20 Year Guarantee**

On metalwork against structural failure and a **7 Year Guarantee** on paintwork\*\*
